IBM Cognos Analytics Practical Project

DASHBOARD PURPOSE

The dashboard turns retail data into decisions

IBM Cognos Analytics dashboard for Mr. DIY

- Tracks sales performance, profit margins, payment methods, channel mix, and regional performance.
- Combines high-level KPIs with category, channel, region, and payment-method views.
- Business value: IBM Cognos Analytics supports faster, more informed retail decisions through interactive, near-real-time analysis.

PERFORMANCE OVERVIEW

Four KPI cards establish the business baseline

NET SALES

470K

Net Sales: 470K INR — overall revenue after discounts.

ESTIMATED PROFIT

271K

Estimated Profit: 271K INR — profitability and net margin efficiency, approximately 57.6%.

AVERAGE DISCOUNT

6.15%

Average Discount: 6.15% — monitors discounting while protecting margins.

TOTAL ORDERS

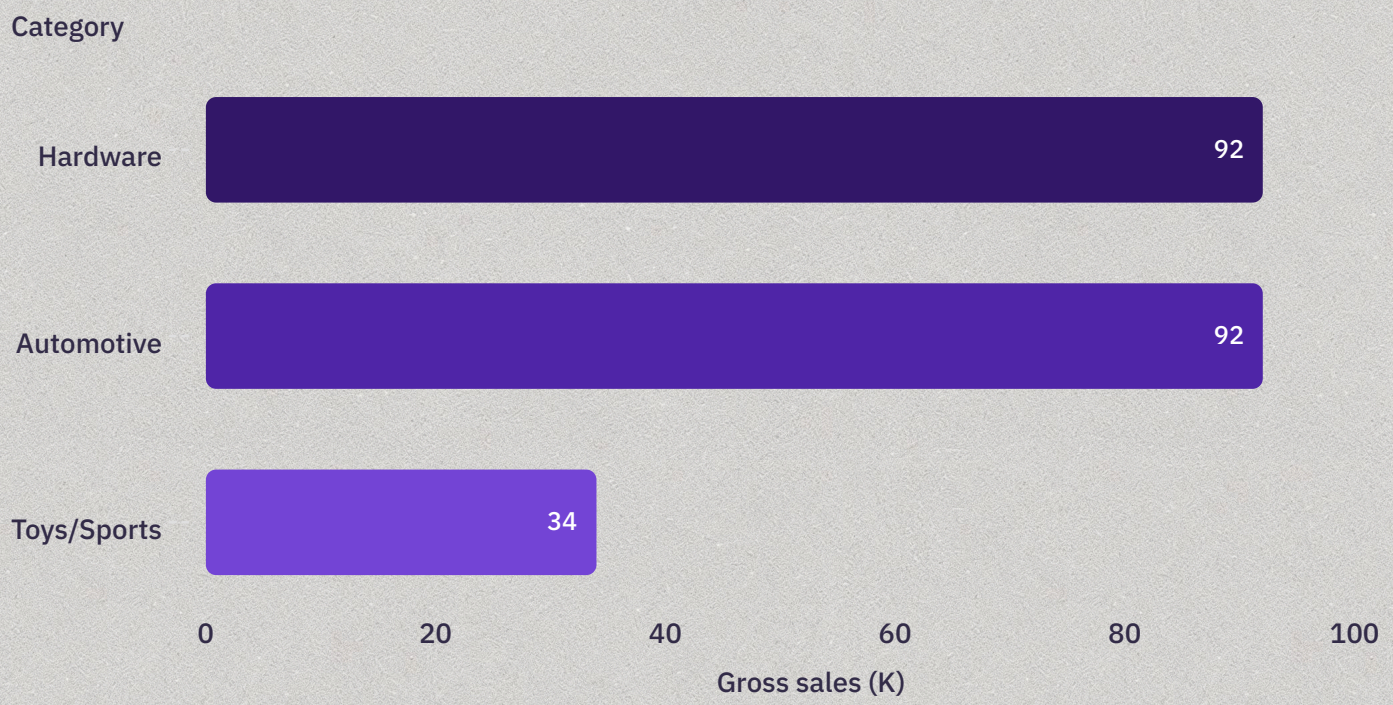

1.5K

Total Orders: 1.5K — measures transaction volume and velocity.

Why single-value cards: they give executives an instant summary without visual clutter.

CATEGORY PERFORMANCE

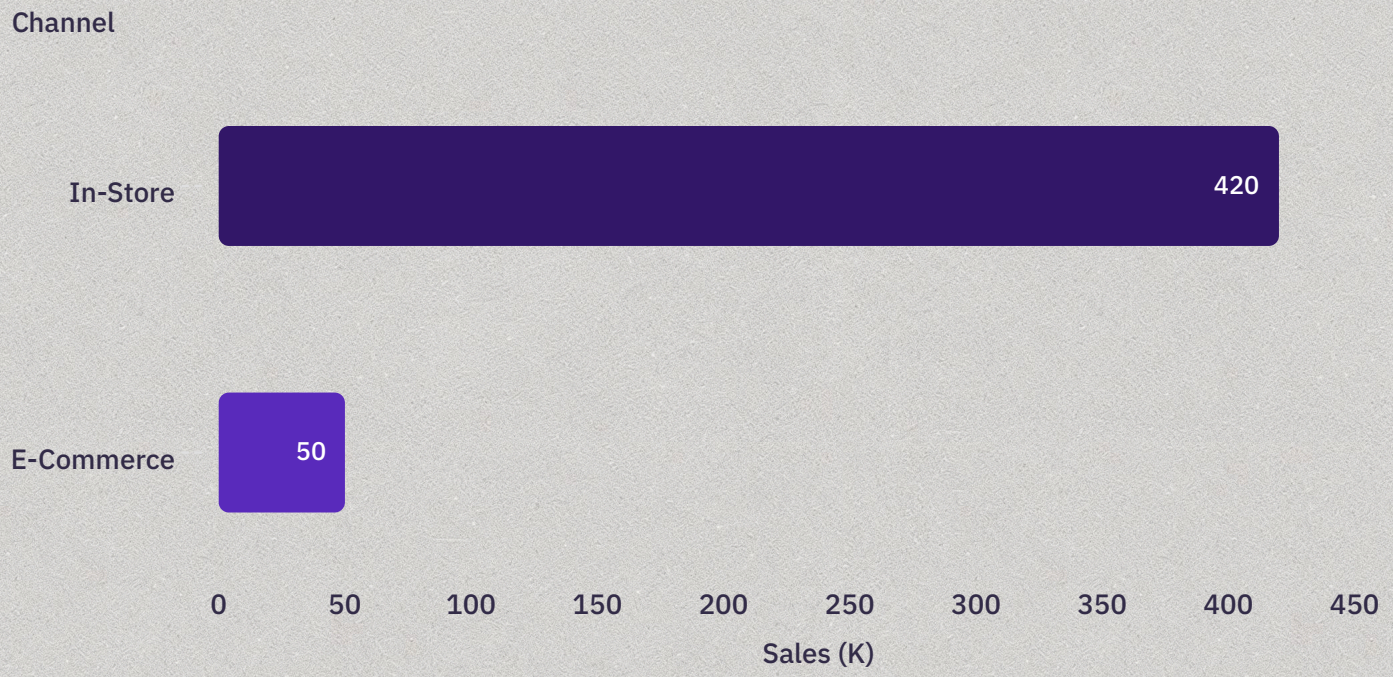

Hardware and Automotive lead gross sales

- Horizontal bars compare gross sales across Hardware, Automotive, Household, Electronics, and Toys/Sports.
- Hardware and Automotive lead at approximately 92K.
- Toys/Sports are lower at approximately 34K.
- **Why this chart:** horizontal bars make category ranking easy to scan and leave room for long category labels.

CHANNEL MIX

In-store sales still dominate the channel mix

- In-Store sales contribute more than 420K, representing over 89% of total sales.
- E-Commerce contributes approximately 50K.
- **Why this chart:** a horizontal comparative bar makes the performance gap between physical and digital channels immediately visible.

REGIONAL PERFORMANCE

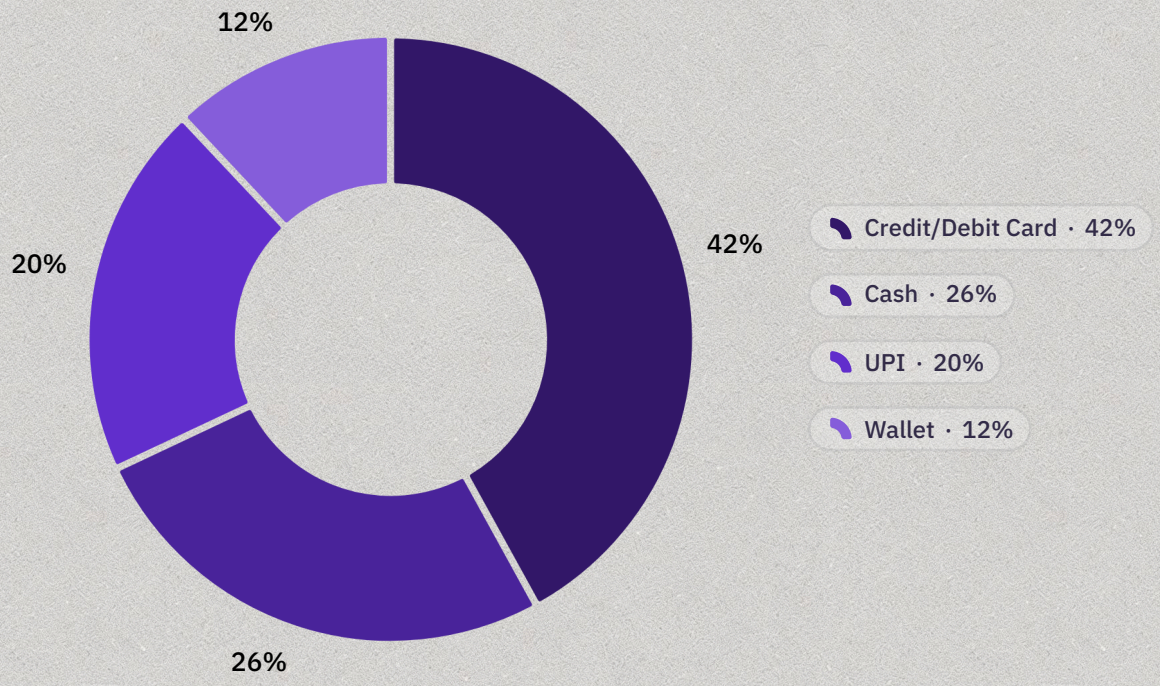

North leads regional performance while East trails

- Vertical columns compare Central, East, North, South, and West.
- North leads at approximately 120K, followed by South at approximately 115K and West at approximately 110K.
- East lags significantly at approximately 32K.
- **Why this chart:** vertical columns make differences across geographic groupings easy to spot.

PAYMENT INSIGHTS

Digital payments account for most payment volume

- Donut chart segments sales contribution across Credit/Debit Card, Cash, UPI, and Wallet.
- UPI, cards, and wallets together account for over 80% of payment volume.
- Cash represents the smallest share.
- **Why this chart:** a donut communicates part-to-whole relationships clearly when the number of categories is limited to four.

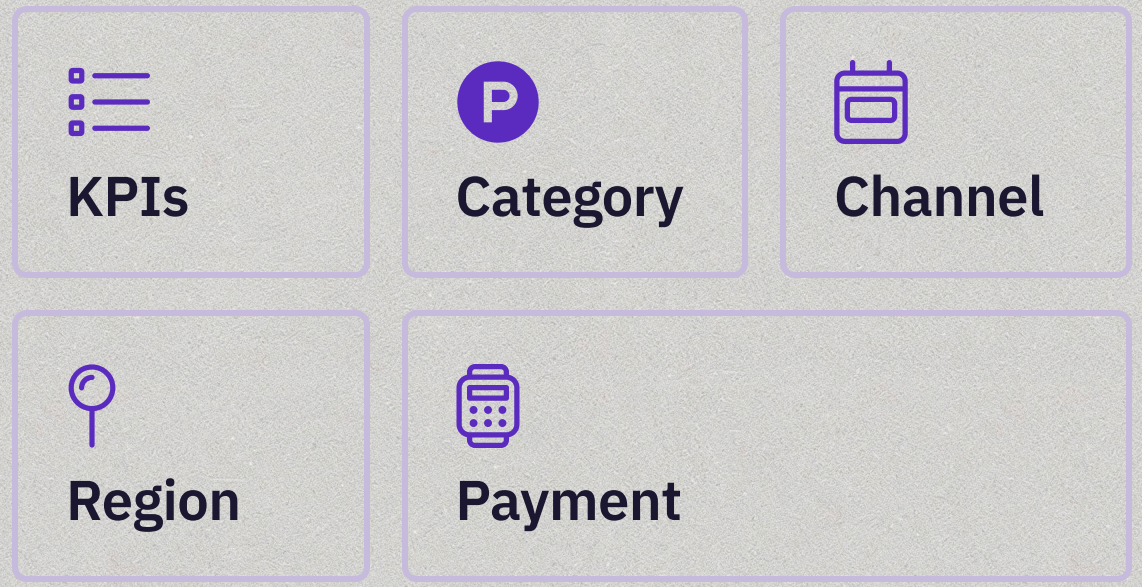

INTERACTION-FIRST ANALYSIS

IBM Cognos connects the views into one decision surface

Global filters and cross-visual interactions let users move from an overall result to the underlying category, channel, region, or payment view.

Near-real-time data integration helps store managers adjust stock, pricing, and promotional decisions faster.

The unified layout moves from KPIs to diagnostic detail without changing tools or context.

ACTION AGENDA

Three actions can turn insight into performance

01

Regional push

Regional push: investigate the East region and target it with localized sales efforts.

02

Digital expansion

Digital expansion: use the strong digital-payment preference to promote the E-Commerce channel.

03

Merchandise focus

Merchandise focus: deepen Hardware and Automotive inventory while cross-selling slower categories such as Toys/Sports.

CLOSING VIEW

The dashboard points to a practical growth agenda

- Mr. DIY has a strong sales and profit baseline, led by in-store performance and top product categories.
- The clearest opportunities are East-region recovery, E-Commerce growth, and better balance across categories.
- IBM Cognos Analytics makes the analysis interactive, repeatable, and useful for day-to-day retail decisions.
